Question	Answer
Project name	Satellite and UAS imagery use to implement timely irrigation strategies
Project background	Unmanned aerial systems (UASs)and satellites have been recognized as available platforms to provide near real time feedback of temporal and spatial conditions found in agricultural fields throughout the crop growing season. However, UASs have not been widely studied in irrigated settings. Further, traditional multispectral satellites have a low revisit frequency and large pixel sizes; which has limited their wide adoption for routine agricultural water management. With the advent of new multispectral microsatellites, capable of high revisit frequency (daily to several times per day) and high spatial pixel resolution (3 m), an opportunity exists to evaluate their applicability in monitoring crop water use. Therefore, the main objectives of this study were: a) to assess the potential use, and accuracy, of UASs and microsatellite images, in ETa models, to determine actual water use for irrigated maize, citrus, and onions; and b) to assess the accuracy of a single source energy balance and a reflectance based ETa models.
Dataset name	Nebraska WCREEC Data
Primary author Include first & last name, institution affiliation, and email address.	José Chávez, Colorado State University, jose.chavez@colostate.edu
Primary contact The primary contact may be the same or different from the primary author. Include first & last name, institution affiliation, and email address.	José Chávez, Colorado State University, jose.chavez@colostate.edu
Dataset description Please provide a brief, clear summary description of the dataset contents. Indicate as applicable: purpose and scope; time period; areas of investigation; and any other special characteristics.	Data includes: 1) PlanetDove images used correspond to days free of clouds and for days not affected by wetting events and crop root zone water redistribution. Images acquired during the following days were used: June 27, 28, 29, 30, July 3, 16, 17, 18, 19, 24, August 20, 26, 28, and 29. PlanetScope multispectral reflectance based NDVI values, within the research plots, were averaged for this study site; 2) maize ETa maps depicting different ET rates; 3) summary statistics of the evaluation of maize ETa estimates

Spatial coverage Please be specific as possible about the geographic coverage of your data, and record the information according to defined standards, such as FGDC or the Getty Thesaurus of Geographic Names. You can enter lat/long data, county names, state names, etc.	The study was conducted at the UNL West Central Research, Extension, and Education Center (WCREEC) in North Platte, NE (41.1oN, 100.8oW, 861 m above sea level). North Platte has a semi-arid climate and the predominant soil at WCREEC is a Cozad silt loam with field capacity of 0.29 m3 m-3 and permanent wilting point of 0.11 m3 m-3 (Payero and Irmak, 2006). The study consisted of three randomized plots embedded within the UNL Testing Ag Performance Solutions (TAPS, taps.unl.edu) farm management competition.
Temporal coverage Describe the temporal coverage of your dataset: Start: Time of day, Date, Month, Year Finish: Time of day, Date, Month Year	2019: June 27, 28, 29, 30, July 3, 16, 17, 18, 19, 24, August 20, 26, 28, and 29.
Re-use limitations Describe known problems or caveats that would limit reuse of the data (e.g., uncertainty, sampling problems, blanks, quality control samples) and/or that future potential users of your dataset should know about. Or indicate "None."	
Citations Please include full citations and DOIs for articles published based on or related to this dataset. Or indicate "None."	
Keywords Please add a few appropriate National Agricultural Library keywords: https://agclass.nal.usda.gov/vocabularies/nalt	unmanned aerial vehicles; multispectral imagery; microsatellites; remote sensing
Tags Please add a few of your own user-defined tags that would be useful to others who might use your dataset in the future.	reflectance based crop coefficient method
Acronyms & abbreviations Please define any acronyms, site abbreviations, or other project specific designations used in your dataset. Or indicate "none."	UAS - unmanned aerial systems
Other dataset storage location Has this dataset already been uploaded elsewhere? Yes or No Reasons may include a requirement as part of publishing a paper or storing data on GitHub or other locations to make accessible to others. If yes, please provide the link or other information to explain where the dataset is located and where or how it can be accessed.	Data results and discussion available in project final report.
